

Caring for your plant

Place your plant in the fiber pot
in a well-lighted place
away from direct sunlight.

Water regularly to keep the soil moist.
(Do not over water and drown your plant!)
You will see a tiny green shoot in 7-10 days.

When your new plant is too big for the peat pot,
place it (still in the peat pot) in a larger plant pot
filled with soil, or in a sunny area in the garden.
